To regain access, please make sure that cookies and JavaScript are enabled before reloading the page. Alarm clocks, cable TV converter boxes, home answering machines, and inexpensive calculators often feature seven-segment displays in their design. There are two primary types of these displays: common cathode and common anode. Understanding the functionality and differences between them is crucial for designing various electronic devices. In this activity, you will learn to use seven-segment displays to display both alpha and numeric characters, as well as be introduced to the Seven-Segment Display Driver.
